Making Lincolnshire Safe

WORKING *TOGETHER* TO MAKE LINCOLNSHIRE THE *SAFEST* PLACE TO LIVE, WORK AND VISIT

COMMUNITIES · PEOPLE · PARTNERS · CULTURE · CAPABILITY

STOP CRIME AND ASB · PROTECT FROM HARM · HELP THOSE IN NEED

STOP CRIME AND ASB

- We will have sustained success in reducing overall crime and anti-social behaviour over the next 5 years
- We will see sustained reductions in offending
- We will have a workforce who are knowledgeable, confident, skilled & equipped in investigating crime & ASB and the causes of each

PROTECT FROM HARM

- We will have communities who feel safe and protected from harm
- We will have a sustained reduction in repeat victimisation, abuse and exploitation
- We will have a workforce who are knowledgeable, confident, skilled and equipped in problem solving and harm prevention

HELP THOSE IN NEED

- We will be people focused and offer the highest standard of care with sustained reductions in repeat calls for service
- We will have strong partnerships with common goals and clearly defined support pathways for those in most need
- We will have a workforce who are knowledgeable, confident, skilled & equipped in working with people with complex needs and/or who are vulnerable

The Statistical Process Charts (SPC) are graphs used to study how a process changes over time. The main aims of using SPC charts are to understand what is 'different' and what is 'normal'.

SPC charts require a minimum of 10 data points in order to create a valid chart, although there is increased reliability when using 20 or more data points. Data should also be plotted chronologically in date or process order, usually shown as distinct data points. The following are then calculated:

1) Average (mean) based on the previous rolling 36 months to end of the current / most recent reporting month. Any data sets that do not have a full 36 months, use the entire available data set, until a full 3 years are available.

2) Standard Deviations used to determine how far a value is from the mean. The SPC charts are set to two standard deviations.

3) Seasonal averages are based on the same month for the last 3 years, including the most recent year. For example, the seasonal average for October 2023 is calculated from the average of October 2021 , October 2022 and October 2023.
Note the tolerance levels have been re-set as the level of offending has returned to pre-covid levels
